Introduction

The purpose of this document is to help you synchronize the Nokia E60 notes, calendar and contacts information with a compatible PC or a remote Internet server.

The application uses SyncML technology for remote synchronization. For information on SyncML compatibility, contact the supplier of the applications with which you want to synchronize your device.

The available applications you can synchronize may vary. Contact your service provider for more information.

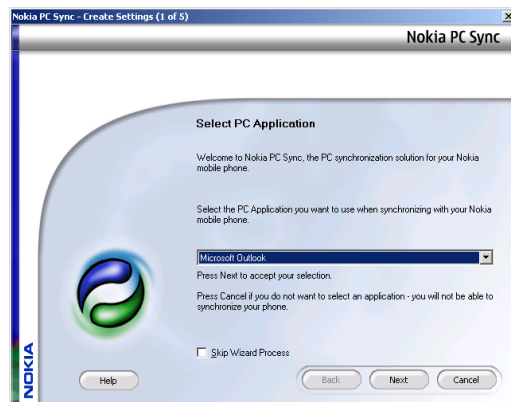

Synchronizing data using Nokia PC Suite

Nokia PC Suite connectivity software for the Nokia E60 must be installed and configured first. For the latest Nokia PC Suite software, see the Nokia website www.nokia.com or www.nokiausa.com.

To synchronize data using Nokia PC Suite, do the following:

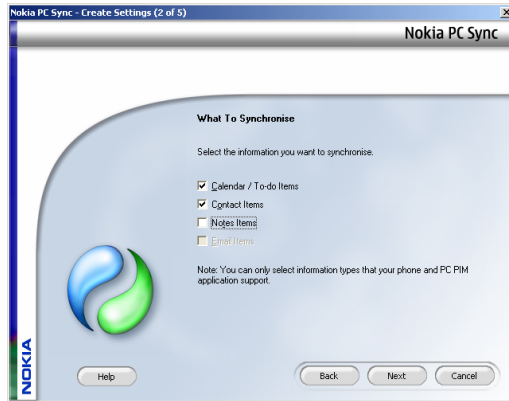

- 1 Connect your Nokia E60 to a PC that has Nokia PC Suite for the Nokia E60 installed.
- 2 Open [Nokia PC Suite](#) for the Nokia E60 on the PC and click [Synchronize](#). If you do not have a synchronization profile, [Nokia PC Sync](#) starts a wizard for defining the synchronization settings. To move forward in the wizard views, click [Next](#), and to move backwards, click [Back](#).

- 3 Select the PC application that you want to use to synchronize data with your Nokia E60.

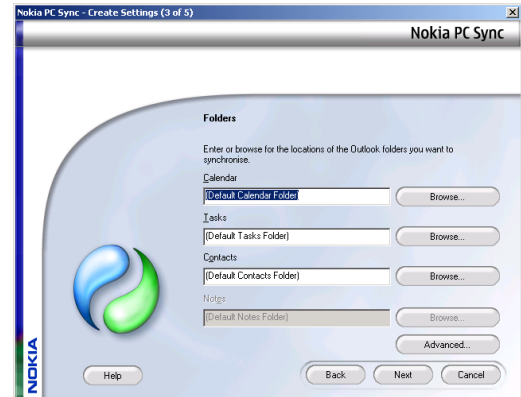

- 4 Click [Next](#), and define the data on the PC that you want to synchronize with your Nokia E60. The data options depend on the PC application you selected as the data source.

For the best performance, select only the data that you want to synchronize.

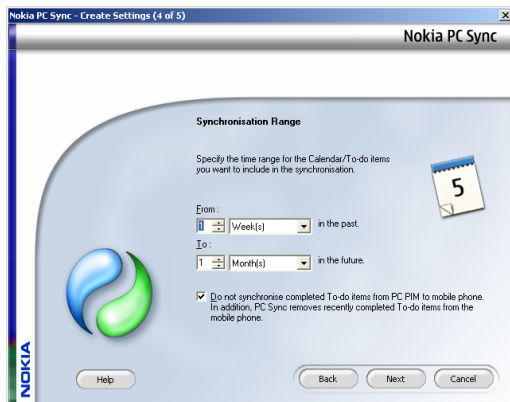

- 5 Click **Next**, and select the Outlook profile to synchronize with (if you are synchronizing with Microsoft Outlook).

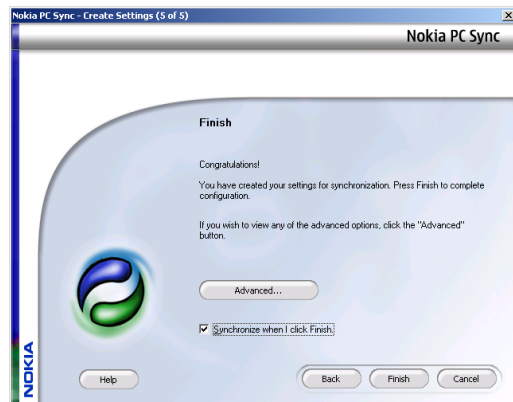

- 6 If you need to browse for the Outlook folders to be used, click **Select folders**. Otherwise click **Next**. Click **Browse** to look for a location, and **Advanced** to define additional settings.

- 7 Click **Next**, and define the time range for calendar and to-do items that you select to synchronize.

- 8 Click **Next**, and define whether you want to start the synchronization after you click **Finish**.

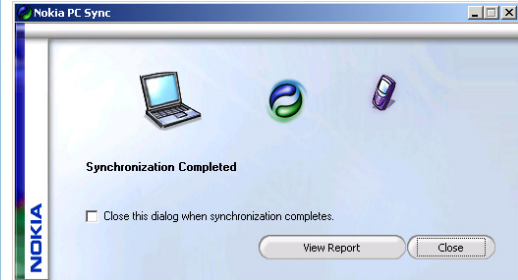

- 9 Click **Finish** to close the wizard. If you select to synchronize after clicking **Finish**, the synchronization is started.

- 10 Click **Synchronize Now** to start the synchronization. Note that depending on the amount of data you are synchronizing, the process may take a long time.

- 11 After the synchronization is completed, click **View report** to view a report of the synchronization, or **Close** to return to the main screen.

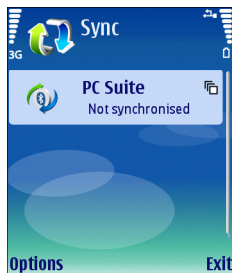

In the main screen, you have the following options:

- Click **View Last Report** to view a report on the last synchronization.
- Click **Properties** to set the synchronization settings.

To create a new PC Suite synchronization profile, click **Properties**, then **Create new configuration**, and define the synchronization settings. Note that this replaces your current profile.

Creating and editing synchronization profiles

← Select **Menu** → *Connect* → *Sync*.

Tip: You may receive the synchronization settings as a message from your service provider.

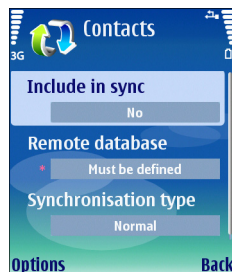

Creating a new profile

Your device has a predefined profile for PC Suite and normally you do not need to modify it.

To create a new profile to connect with another synchronization server, do the following:

- 1 Select *Options* → *New sync profile*. A profile creating wizard opens to help you define the correct settings. When the device asks if you want to copy an existing profile, select *No*.

- 2 Enter a name for the profile in *Sync profile name*.
- 3 Select *Applications*, and define the following settings for each application you want to synchronize:

- *Include in sync* – Select whether to synchronize the application with this synchronization profile.
- *Remote database* – Enter the path to the database with which you synchronize the application.
- *Synchronisation type* – Select the direction of synchronization. Select *Normal* to synchronize data from the device to remote database and back, *To phone only* to synchronize data from the remote database to your device, or *To server only* to synchronize data from your device to the remote database.

Press *Back* to return to the profile settings.

- 4 Select [Connection settings](#), and define settings for the following:
 - [Server version](#) — Select the SyncML version you can use with your server.
 - [Server ID](#) — Enter the server ID of your server. This setting is only available if you select 1.2 as the SyncML version.
 - [Data bearer](#) — Select the data bearer to connect to the remote database during synchronization.
 - [Access point](#) — Select the access point to use for the synchronization connection, or create a new access point. You can also choose to be asked for the access point every time you start synchronizing. This setting is only available if you select Internet as the data bearer.
 - [Host address](#) — Enter the address of the server that contains the database with which you want to synchronize your device.
 - [Port](#) — Enter the port number of the remote database server.
 - [User name](#) — Enter your user name to identify your device to the server.
 - [Password](#) — Enter your password to identify your device to the server.
 - [Allow sync requests](#) — To allow synchronization to start from the remote database server, select [Yes](#).
 - [Accept all sync reqs.](#) — To have your device ask for your confirmation before accepting synchronization from the server, select [No](#).

- [Network authentic.](#) — To authenticate your device to the network before synchronization, select [Yes](#). Enter your network user name and network password.

Press [Back](#) to return to the profile settings.

- 5 Press [Back](#) to finish creating the profile and save the settings.

Editing a synchronization profile

Your Nokia E60 contains a profile for Nokia PC Suite, and the basic setup is done with Nokia PC Suite. You need to edit these predefined settings only if the settings have been changed. For detailed information, see the User's Guide for Nokia PC Suite or the help for Nokia PC Sync. Note that some PC Suite profile settings are read-only.

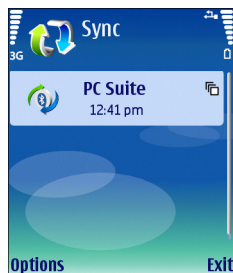

To edit a synchronization profile, select the profile you want to edit and select [Options](#)→ [Edit sync profile](#).

The profile settings are described under "Creating a new profile".

To delete a profile, select the profile you want to delete and select [Options](#)→ [Delete](#).

Synchronizing data using the Nokia E60

← Select **Menu**→ [Connect](#)→ [Sync](#).

To synchronize data using the Nokia E60, do the following:

- 1 Create and/or edit a synchronization profile to fit your needs. Note that if you are using the PC Suite profile, you do not need to edit it to start data synchronization.
See "Editing a synchronization profile" on page 9.
- 2 Connect your device to a compatible PC. You can use a Bluetooth, an infrared, or a data cable connection. If you are using a data cable, confirm that the [PC Suite](#) mode is selected.
- 3 Start the synchronization from the compatible PC.

After you have synchronized your device with a computer, you can view the synchronization log. To open the

synchronization log, select a profile and press [Options](#)→ [View log](#). The log shows, for example, the date and time of the transfer.
