About SkyDrive

Store your stuff in the cloud. You don't need to worry about freeing memory for your favorites or new apps.

With the SkyDrive app, you can copy your contacts and photos from your Symbian phone to SkyDrive. You can later access your data using other devices compatible with SkyDrive, such as Lumia phones, or online at www.skydrive.com.

To upload content, you need an internet connection. If you don't have a data plan, the data transmission costs may pile up quickly. For info about possible data costs, contact your network service provider.

Install the SkyDrive app on your phone

With the SkyDrive app, you can easily manage your personal data.

1. Follow the instructions on your phone to install the SkyDrive app on your phone.

For Lumia phones, you can download the SkyDrive app from Store.

2. Open the SkyDrive app, and sign in to Windows Live with your Windows Live ID, also called your Microsoft account. If you don't have an account yet, follow the instructions on your phone to create one.

Upload data from your Symbian phone

Keep your photos safe in SkyDrive.

1. Select the content you want to upload to SkyDrive.
2. Start the upload. Your contacts and photos are uploaded to Windows Live People and **SkyDrive > All photos** respectively.

By default, to speed up the upload, your photos are scaled down to max. 719x719 resolution before upload, which affects their quality if, for example, you print them later. If you want to preserve the quality of your photos, you can change the setting in  **Settings**.

Scaled-down images cannot be updated to or replaced with full-resolution images after you've uploaded them to SkyDrive.

Uploading large images over a slow network connection might affect the overall performance of your phone.

Selected photos and contacts are uploaded to SkyDrive once only, even if you later remove them from SkyDrive.

If you change the details of a contact after uploading it to SkyDrive for the first time, not all changes may be updated. New contacts and changes in **First name**, **Surname**, and **Company** are updated the next time you upload contacts.

Download data to your Lumia phone

You can download your personal data from SkyDrive to your Lumia phone.

When connecting to SkyDrive, use the same Microsoft account that you used when uploading the content.

1. Your contacts are automatically synced between the Windows Live People service and the People hub on your Lumia phone.
2. To automatically sync your photos between SkyDrive and your Lumia phone, on the start screen, swipe left, and tap  **Settings**. Swipe to **applications**, and tap **photos+camera** > **SkyDrive**.
