The availability of particular products and applications and services for these products may vary by region. Please check with your Nokia dealer for details, and availability of language options.

Some operations and features are SIM card and/or network dependent, MMS dependent, or dependent on the compatibility of devices and the content formats supported. Some services are subject to a separate charge.

Refer to the user guide for other important information about your device.

ISSUE 1 EN

Settings wizard

Settings wizard configures your device for network service provider, e-mail, push to talk, and video sharing settings based on your service provider information.

The availability of different settings in Settings wizard depends on the features of your device, SIM card, network service provider, and availability of the data in the settings wizard database in the device memory.

To use these services, you may have to contact your service provider to activate a data connection or other services.

When you use the application for the first time, you are guided through the settings configuration. To start the wizard, select **Start**. To cancel the operation, select **Exit**.

If you do not have a SIM card inserted, you are asked to select the home country of your network service provider and your network service provider. If the country or network service provider suggested by the wizard is not the correct one, select one from the list.

To access the main view of Settings wizard after the settings configuration, select **OK**. If the settings configuration is interrupted, the settings are not defined. After closing the wizard you can start to use the configured applications in their own menu locations.

E-mail settings

When you choose to add a new or activate an existing mailbox, Settings wizard asks you to enter an e-mail address, mailbox name, user name, and password.

If the e-mail service provider you entered is unknown, the wizard asks you to define the mailbox type and incoming and outgoing mail servers. Contact your service provider for more information.

To start using the new mailbox after entering the required information, select **Yes**, or select **No** to return to the Settings wizard main view.

Network service provider settings

When you choose to configure your network service provider settings, such as MMS and WAP settings, Settings wizard asks you to select from the available settings, then **OK**.

Push to talk settings

This option is available only if you have the application installed in your device, and you have subscribed to the service.

When you choose to configure your push to talk (PTT) (network service) settings, **Settings wizard** asks you to define: PTT nickname, user name, and password.

Video sharing settings

This option is available only if you have the application installed in your device and you have subscribed to the service.

To be able to make a video call, you must have a USIM card and be in coverage of a UMTS network.

When you choose to configure your video sharing (network service) settings, **Settings wizard** asks you to enter a video sharing address, user name, password, video sharing proxy user name, and password; and select **OK**.

After creating video sharing settings, **Settings wizard** asks if you want to add the video sharing address to a contact. Select **Yes** or **No**.

More information

If you experience any problems with **Settings wizard**, visit the Nokia phone settings website at www.nokia.com/phonesettings.
